

KABI Gluemaster

KABI has since 1937 manufactured & distributed the popular KABI Gluemaster. The first 5-10 years it was mainly used for oils and grease solutions, but after some years the Insulation, leather, orthopedic and textile industry asked KABI for a development of this model, so that they could use it together with glue applications. Today the KABI Gluemaster is being used worldwide as a valued product, due to many hours of engineering, developing and testing, before we got the excellent result, as we know it today. KABI is manufacturing the Gluemaster in a straight spout model or a bent spout model. The accessories have the same internal thread, which make it interchangeable with both Gluemaster models.
